

"Chair with movable seat and backrest"

ABSTRACT

5 A chair with a seat and a backrest, a structure supporting the seat,
and a base; the support structure has two lateral uprights and at least
one projecting element provided with a substantially longitudinal guide,
and the backrest is associated with two right-angle elements; each of
the right-angle elements has a first end connected to the backrest, a
central part connected rotatably by means of a first hinging pin to a top
10 end of one of the uprights of the support structure of the seat and a
second end connected by means of a second hinging pin to the seat;
the seat is connected to the support structure by means of a telescopic
rod, which can be shortened and lengthened in a resilient manner, and
an element which can be slidably engaged in the guide of the projecting
15 element. (Fig. 2)
